

But first you need to make sure that the eyes and nose etc are filled with the main color fill.

- Left click on the Fill Tool.
- Select the color (usually black) and type of fill stitch for the eyes and nose – I find satin stitch is good for small areas.

- Left mouse click in those areas to fill with stitches.
- Left mouse click on the Hole Sewing Tool  to select it.
- Left mouse click in the main color area where you wish the holes to be filled. The Set Hole Sewing screen will appear.
